Exhibit A. Origin and Breeding History of the Variety

Soybean Variety 90A07

200000153

Variety 90A07 evolved from a 1991 cross of 9091/9008.

It is an F5-derived variety which was advanced to the F5 generation by modified single seed descent. The F6 progeny row of 90A07 was grown in the summer of 1995. Subsequently, 90A07 has undergone three years of extensive testing and purification and has been observed by the breeder to be uniform and stable for all plant traits from generation to generation, with no evidence of variants. On the basis of yield, iron deficiency chlorosis tolerance, and exceptional field emergence, variety 90A07 was assigned a commercial number.

The purification block was grown during the summer of 1997 and 60 sublines were bulked for increase. 10 acres of 90A07 (breeders seed) were grown in the summer of 1998. 202 acres of parent seedstock (foundation seed equivalent) were grown in the summer of 1999 and 6564 bushels harvested.

Exhibit B. Statement of Distinctness

200000153

Soybean Variety 90A07

Variety 90A07 is most similar to variety 9007. Both varieties have purple flowers, gray pubescence and yellow seeds with yellow hila. However, 9007 is resistant to race 1 of *Phytophthora megasperma* var. *sojae* whereas 90A07 is susceptible to race 1. These two varieties also differ in pod wall color in that 9007 is brown for this characteristic whereas 90A07 is tan.

Variety 90A07 is also similar to MN0301, and McCall. However, 90A07 differs in at least one way from each of these other varieties. Variety 90A07 is susceptible to race 1 of *Phytophthora megasperma* var. *sojae* whereas MN0301 is resistant. Variety 90A07 has iron chlorosis deficiency resistance while McCall is more susceptible to iron chlorosis stress.

Exhibit D. Additional Description of the Variety

Soybean Variety 90A07

In Exhibit C we have identified variety 90A07 as susceptible to bacterial blight, brown spot, pod and stem blight, rhizoctonia root rot, bud blight, yellow mosaic, cowpea mosaic, pod mottle and seed mottle.

This does not mean that variety 90A07 is any worse for these problems than other varieties of similar maturity. Rather, we do not consider 90A07 to be immune to these problems. Therefore, we have chosen to be conservative and have identified the line as "susceptible".

200000153

Variety 90A07 is a mid Group 00 variety. If Group 00 varieties are divided into tenths, the relative maturity of 90A07 is 00.7.
